

The New Carlisle VERSA TURF®

Carlisle launches new Versa Turf® tire!

The Carlstar Group introduces the turf friendly Radial tire with the traction of an Ag tire

The Carlstar Group announces the launch of the new Carlisle branded Versa Turf tire in Europe. Designed with a radial construction for improved flotation, the Versa Turf reduces turf disturbance while maximizing traction with its 60% deeper tread depth compared to a standard R3 tire design.

This new design builds on the highly-valued features offered in The Carlstar Group's, market-leading ATV, Lawn & Garden, and Agricultural tires.

"We are so excited to bring this new construction to the market," said Brian Preheim, Market Segment Manager at The Carlstar Group. "The Versa Turf is the perfect blend of R1 traction with R3 turf protection. The tire is strategically constructed to optimize tire-to-soil impact without damaging the turf."

Engineered with superior mud-shedding performance by featuring self-cleaning breaker bars in the tread and rounded shoulders. This design reduces turf damage during turns while improving traction in all conditions. The radial construction and thread design make this the tire to have in snow and ice.
